On **November 17<sup>th</sup> - 18<sup>th</sup>**, 2011 the **5<sup>th</sup> workshop „Seabed Acoustics“** will be held in **Rostock-Warnemünde**.

You may still have good memories on the previous workshops. We received much positive feedback and have started already with enthusiasm and new ideas to prepare this year's event.

Main focus are presentations and discussions, which are planned for the first day of the workshop. Development projects, technology reports and user experiences in the field of acoustical seabed investigation will be presented. After the presentations, during the session breaks and at the popular evening event will be sufficient time available for discussions and exchange of experiences. Workshop language is English.

During the second day of the workshop equipment will be shown in operation on a river boat.

Please pre-register by e-mail ([workshop2011@innomar.com](mailto:workshop2011@innomar.com)), phone or fax to receive a detailed workshop programme that will be sent early August.

## Call for Papers

Since 2003 Innomar hosts the biennial workshop "Seabed Acoustics". On November 17<sup>th</sup> – 18<sup>th</sup>, 2011 this workshop will take place again in Rostock-Warnemünde.

You may still have good memories on the previous workshops. We received much positive feedback and are now going to prepare this year's event where we expect to have about 100 attendees again.

For the first day presentations and discussions about development projects, technology reports and user experiences in the field of acoustical seabed investigation are planned. Traditionally an informal dinner will close the first day. During the second day of the workshop equipment of different manufacturers will be shown in operation on a river boat.

If you like to present your work during this workshop (time for oral presentations is 20 minutes plus 5 minutes discussion), please send a **short abstract** of max. 250 words until **15<sup>th</sup> June 2011** by e-mail ([workshop2011@innomar.com](mailto:workshop2011@innomar.com)). Authors will be notified by end of June. All presentations will be included in the workshop's proceedings that will be available in electronic format (PDF) to all attendees.

Workshop language is English. Presentations should address one of the following topics with the main focus on applications:

- high-resolution sub-bottom profiling,
- acoustics for in- and offshore installations (pre-site investigations, pipeline inspection, risk mitigation, etc.),
- using various acoustic profiling systems simultaneously, e.g. sub-bottom profiler, multibeam, sidescan sonar,
- underwater archaeology,
- underwater acoustic signal and image processing,
- acoustic seafloor characterization.

However this list is not exclusive. If you have an interesting story to talk about that is not covered by the topics listed above, please feel free to propose this as well.

Looking forward to get a lot of interesting proposals.
